

Simple Mask—no pleats

This is real quick and less needles breaking.

Could easily do it with four layers of fabric.

Basically 7x10" rectangle, two or four layers. When using two layers of fabric, add a layer of fusible non woven interfacing between the layers.

Right sides together-sew around all edges while leaving space to turn.

Trim corners and turn right side out again.

Iron and then topstitch close to all edges.

Fold over @ 1/2" on the ends and iron down.

Stitch down and then thread the tie through the two casings.

Cut tie from old t-shirts. 1/2" strips across the body to get the most stretch. Cut circle so it is one long piece.

Pull and it will roll into a smooth tie.
